

Optimal Herd and Flock Health

There is a New Sheriff in town that **does not** hold on to traditional ideas, as does industry bureaucracy based on committee votes to actual solutions for animal health.

What has been years in the making became very clear that drinking water is the primary nutrient and has every effect on the outcome of production and health.

Salt of The Earth Solutions has researched an extensive application to biologically turn on the immune system whether it be in Poultry, Swine or Cattle to achieve optimal health for livestock producers.

We first supply the water with an oxygen mineral supplement to increase oxygenation to the blood stream, improve digestion, immune system and well being in livestock. Also recognized by the South Africa Dept. of Agricultural as the “Super Energized Oxygen Mineral Supplement” under section (farm feeds). An important part of the efficacy of this product is the withdrawal of all forms of vaccines-antibiotics and growth stimulants. Cell vet is based on Cell Food, the world’s leading oxygen mineral equivalent product for humans receiving the 1997 Advanced Technology Award from the International Hall of Fame U.S.A.

With the Cell Vet we structure the water through advanced forms of water molecules that increases the thermal conductivity or energy of water three fold over normal tap water called Bio Photonic Energy.

This will literally turn on the biological machine within the immune system of everything it comes in contact with and restores the natural balance of good bacterial flora.

Remember! It is a fact that antibiotics only kill bacteria and not viruses. Antibiotics kill friendly bacteria in the colon, which automatically lends to Candida or yeast over growth. They suppress the immune system making animals more susceptible to other infectious type disease.

Using antibiotics to treat livestock complications creates resistant strains in the body. The surviving bacteria **WILL THEN PASS ON** their survival secrets to other strains of bacteria in the body. Each subsequent antibiotic only adds to the knowledge base of these man made super bugs. The only way to eliminate them is to restore the natural balance of good bacteria flora.
